Spaces that are *green, smart* and built to last

We help architects, interior designers, developers and business owners create spaces that use less energy, feel better to be in and run smoothly for years. From the first design conversation to everyday operation, we bring green thinking and smart technology together under one roof.

01 Consulting *Expert guidance from the first sketch*

The best outcomes are planned in, not added on. Our consultants join your project early and work alongside your design team, so every decision serves performance, comfort and budget.

- 
IGBC Green Certification
End-to-end support for IGBC ratings, including Green Interiors: registration, GreenPro product selection, documentation and certification.
- 
Lighting Design
Human-centric, energy-efficient lighting that flatters the space and cuts running costs.
- 
ELV Systems
CCTV, access control, fire alarm, public address and structured cabling, planned as one coordinated whole.
- 
Home Automation
Intuitive control of lighting, climate, shading and security for comfortable, efficient homes.
- 
Audio-Visual (AV)
Boardrooms, auditoriums, retail and hospitality spaces with sound and vision that simply work.
- 
Digital Infrastructure
Reliable networks, Wi-Fi and server spaces designed as the backbone of a modern building.

02

Integration

Many systems, one seamless experience

Great technology feels invisible. We install, configure and commission lighting controls, automation, AV, security and network systems so they work together, not in silos. One team, one point of accountability, and a space that behaves exactly as designed.

03

Facility Maintenance

Performance that lasts beyond handover

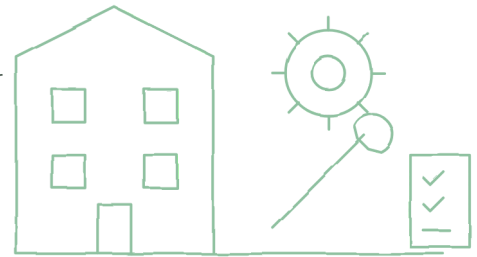

A building's green and smart features only deliver if they keep working. Our preventive maintenance and responsive support keep your systems efficient, safe and up to date, protecting your investment and the comfort of everyone who uses the space.

04

Training

Confidence to get the most from your technology

Technology is only as good as the people using it. We run practical, hands-on training on technology implementation for facility teams, staff, homeowners and design professionals, so every system is used to its full potential, day after day.
